By indications in the corresponding month of previous years and observing the general character of the temperature distribution, an analogue is selected on which to base a monthly weather forecast. This study was made to ascertain the desirability of ascertaining the degree of analogy in the development of synoptic processes and of spatial distribution of temperature and pressure in previous months for the construction of a monthly forecase of the air temperature anomaly over (Earth Sciences--Meteorology, TT, v. 5, no. 9) (over)
